

Mother Nature's Little Helpers

Somat ecoSHRED® Shredder

Somat Pulping System

Before You Compost It – Somat It.

Make Somat part of your environmentally and fiscally sound composting program. Somat pulpers and shredders reduce compostable waste by 80%, helping you facilitate the composting process.

Put Composting on Fast Forward.

Pulped or shredded waste degrades faster than non-processed waste. Somat removes most of the water from waste for a healthier composting process, further improving your facility's environmental effort.

Somat Pulping Systems work in most institutional settings. The ecoSHRED® Shredder fits nicely into total disposable operations, providing the same waste reduction as the Somat pulper with significantly less water and energy usage.

BEFORE

AFTER

Go Green. Save Green.

Somat saves you money too. Pulped or shredded compostable waste is less expensive to haul and preferred by most commercial composters. Less bulk also means fewer trips to the composting facility, reducing your transportation costs and carbon footprint.
